RUANGADIK
EDUCATIONAL TOYS
Volume 1

The tendency of children who are easily bored and does not want to be restrained their freedom, therefore we respond to learning methods using media or auxiliary facilities so that children are not easily bored when learning, namely through playing, here are some types of educational toys used:

1.Geometry Tower Four Shapes

This educational toy consists of four geometric shapes, namely a circle with one hole, a rectangle with two holes, the next is a triangle shape with three holes and the last is a square with four holes.

Each shape consists of four pieces that have the same size with the same color but different colors with other shapes. Our children are told to arrange or insert the hollow geometric pieces into the pegs on the baseboard, this way will train cognitive abilities and reasoning of a problem.

2. Trace

This educational toy in the form of pieces of plywood board with a thickness of approximately four millimeters which in the middle is holed in various shapes, this time we take the example of the shape of the batik pattern, the coloring on the board is intended so that children are interested in playing.

The way to play is that our children tell us to put the board on the paper and then we direct the children to draw following the pattern on the board after that, we tell the children to color with crayons or color markers according to their respective creativity. The benefits of this educational toy are to train perseverance and develop children's creative abilities

.

3.Puzzle.

A classic toy that almost everyone knows. Educational toys in the form of plywood boards consisting of two layers, at the top they are cut in the form of images that are cut into pieces, while the bottom layer is used as a base.

How to Play This Educational Toys Our children tell us to arrange the pieces and put them into a hole in the form of a silhouette of an image. This educational toy serves to train cognitive abilities and train children's accuracy and patience.

4. Counting tree.

Educational toys in the form of a miniature of a tree, on the leaves we give a small peg to hang the fruit pieces in the shape of a fruit and a symbol of numbers.

How to play this educational toy we put a piece of number symbol, after that we tell the children to put the pieces of fruit next to the pieces of the number symbol, the number of pieces of the fruit picture according to the number symbol. Or vice versa, we put the pieces of the fruit picture, after that we tell the children to count and then put the number symbol next to the fruit image according to the number of pieces of the fruit.

With bright shapes and colors, it is hoped that children will be interested in playing, the benefits of this educational toy include as a means of introducing basic number symbols before proceeding to counting operations.
